## Mass spectrometry-based metabolomics kits

Ready-to-use

Automated  
workflow

Standardized,  
quantitative

High  
throughput

# MxP<sup>®</sup> Quant 500 kit

The MxP<sup>®</sup> Quant 500 kit offers functional understanding of host-microbiome interaction.

## Comprehensive pathway coverage

- ▶ 894 biomarkers relevant to nutrition, microbiome, and disease
- ▶ Predefined sums and ratios for advanced biological interpretation

## Functional microbiomics

- ▶ Nutrition-microbiome-host interaction
- ▶ Dozens of metabolites known to be synthesized and modulated by the gut bacteria

## Coverage

- ▶ 630 metabolites from 26 compound classes, 264 metabolism indicators

## Sample volume | type

- ▶ 10 µl | For use with various sample matrices and species

## Throughput

- ▶ 320 samples/week/instrument

## Kit components

- ▶ Patented 96-well filter plate with integrated internal standards
- ▶ Calibration and QC samples, system suitability test samples
- ▶ Protocols for different matrices
- ▶ Instrument-specific methods for triple quadrupole mass spectrometers from Agilent, SCIEX and Waters
